

Got solar on your roof? Help me check our maths.

Hi, I'm Antariksha. I build the tech at Delta Climate Research.

We've made a free map that guesses how much solar every roof in Ballygunge, Barrackpore and Baruipur could hold, and how much it would generate.

Here's the honest bit: we have never checked that guess against a real roof. Not one. Yours could be the first. We'll publish whatever we find, even if it makes us look bad. Especially then.

What I'm asking for

Ten minutes, once. No visit, no wires, nobody climbing on your roof.

- **Your system's monthly generation**, from the inverter app or your electricity bill. As many months as you've got.
- **The basics of the system**: how big it is in kilowatts and how sure you are of that number, which way the panels face, how tilted they are, whether they move to follow the sun (almost none do), and when it went up.
- **Your address**, only so I can find your roof on our map. I don't keep it.

What I do with it

- I keep one anonymous row: a roof number, the ward, the building's number on our map, and your figures. Your name and address don't go in the file. Ever.
- We publish the overall result on our website: how many roofs, how many months, and how close we got. Nobody can pick your roof out of it.
- We don't sell it, share it, or hand it to anyone. Not installers, not the electricity company, not the municipality.
- Changed your mind? Email me and your row is gone the same day.

What you get

- A one-page sheet: what our map said about your roof, next to what your roof actually did.
- A better map for the next person on your street who's thinking about solar.
- My genuine thanks, which cost nothing and are meant.

No money changes hands, in either direction.

Me: ant@deltaclimate.earth · **Angad, our founder:** angad@deltaclimate.earth

The sheet

Fill in what you know. Blanks are fine; "don't know" is a real answer.

WHAT	WHAT TO WRITE	EXAMPLE
System size	kilowatts, from the installer's invoice or the inverter app	5.4 kW
How sure of the size	from the invoice or the app (exact), or a rough guess	exact
Do the panels move	to follow the sun through the day? almost none do	no
Panels face	the direction they point	south, or south-west
Tilt	the angle from flat. "Flat" or "on a frame" is fine if you don't know	20°
Installed	month and year	March 2024
Monthly generation	kWh per month, as many as you have	Jan 2025: 512 · Feb 2025: 588 · ...
Off days	any month the system was off for more than three days, and roughly how long	Aug 2025: 9 days
Inverter app	the make, so I can help you export	Growatt, SolarEdge, Fronius, Sungrow, Huawei, other
Anything else	shading you know about, a tank that moved, a cleaning	"neighbour's mango tree, west side"

Getting the numbers out of the app: most inverter apps have a *Reports* or *Energy* page with a monthly view and an export button. If the export is a pain, a screenshot of the monthly bar chart is enough. Send it to ant@deltaclimate.earth with your address in the email, and I'll take it from there.
